DIGITAL ACCESS CONTROL SYSTEM

**Access
for only
those who
need it!**

YOU CONTROL
THE WHO,
WHERE &
WHEN

The webeye digital access control system (webedadacs) is an innovative new product in the increasing webeye arsenal to defeat the criminal. It has been designed to offer sophisticated entry code and property management information ideally suited for vacant properties.

Who! When! Where!

Keys remain one of property managers biggest headaches. Key collection, delivery and returns (or non-returns!) cause needless, frustrating and sometimes expensive delays, they are difficult to manage and often culminate in a costly lock change. Our revolutionary **webedadacs** is simple to use, easy to manage and gives a comprehensive audit trail of what is happening at your property.

With this system you can allow key staff and contractors to enter multiple sites with their individual security code, issue a code for a day, a week or a defined period with controlled hours and days of entry.

webedadacs also enables the user to:

- Turn on or off the alarm with the webeye alarm system interface.
- Log every action
- Produce a site attendance record
- Photographic record of who enters when using a wireless video alarm
- View attempted misuse
- Record security inspections
- Close down system completely over holiday periods

Management control through your browser or mobile phone

Simple keyless access control

Photographic time stamped entry record

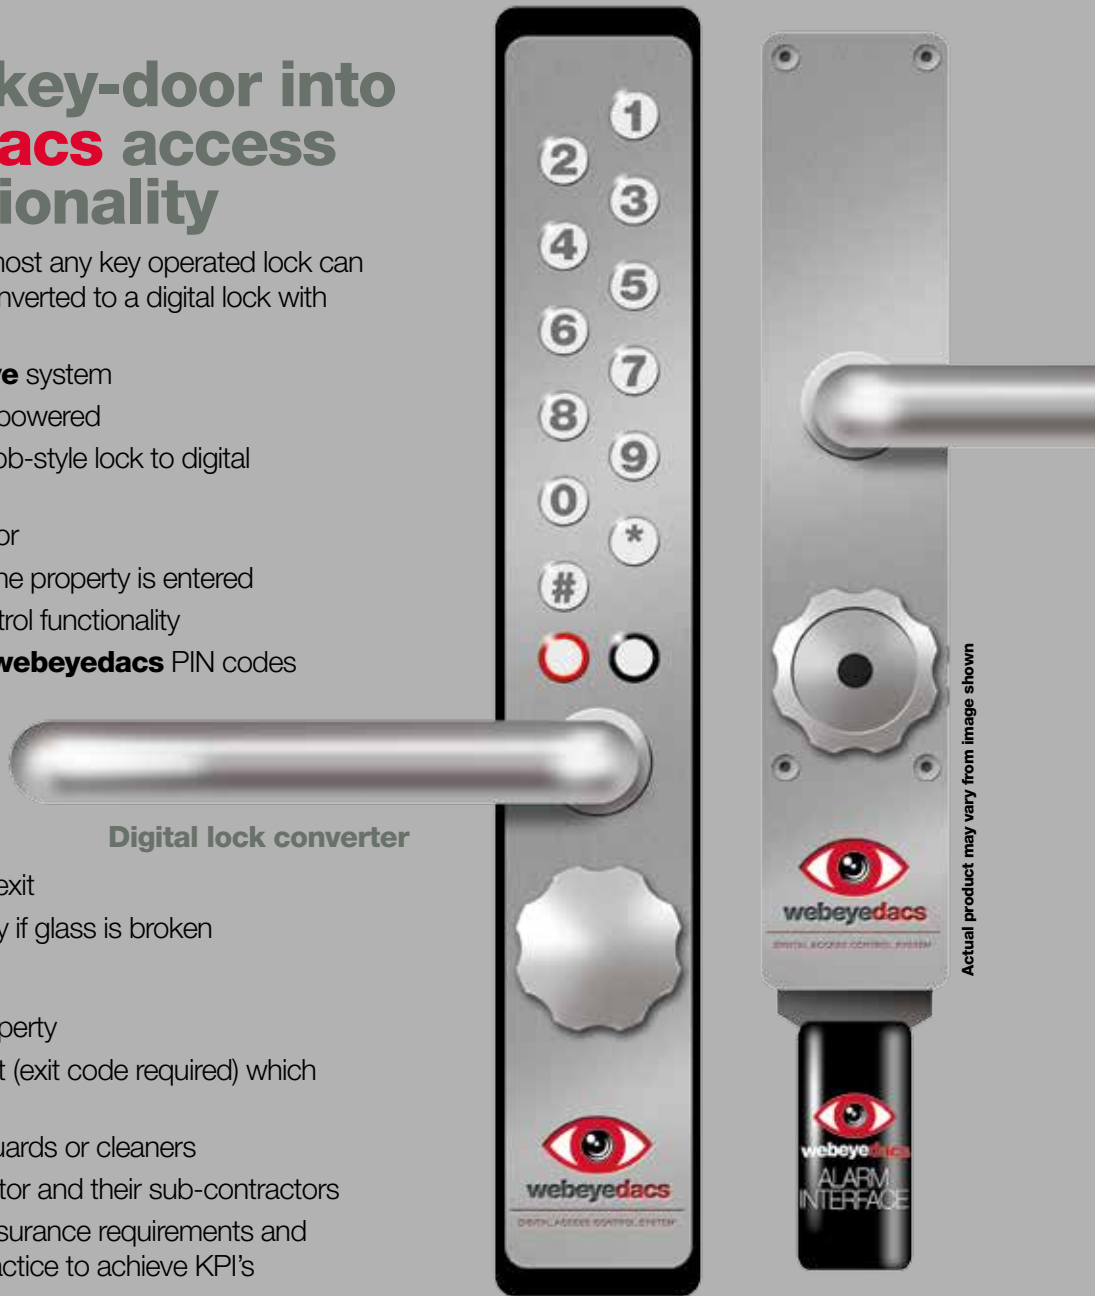

Convert any key-door into the **webeyedacs** access control functionality

With our digital lock converter almost any key operated lock can be temporarily or permanently converted to a digital lock with the lock conversion unit.

- Alarm interface with the **webeye** system
- Wireless and long term battery powered
- Convert any Europrofile or Chubb-style lock to digital keyless operation
- No damage or fixings to the door
- Automatic arm / disarm when the property is entered
- webeyedacs digital access control functionality
- Authorised staff issued unique **webeyedacs** PIN codes with additional short term and 24-hour codes also available
- SD card download of all activity at the property including door movement
- Internal thumb-turn for keyless exit
- Lock-out facility preventing entry if glass is broken

Management control

- ✓ Monitor who entered each property
- ✓ See when they entered and left (exit code required) which can validate time sheets
- ✓ Timed arrival of contractors, guards or cleaners
- ✓ Activity history of each contractor and their sub-contractors
- ✓ Innovation meeting property insurance requirements and housing management best practice to achieve KPI's

Actual product may vary from image shown

Digital lock converter
