THE REVOLUTIONARY  
MONITORING AND  
SECURITY ALARM  
SYSTEM DESIGNED  
FOR THE ELECTRICITY,  
GAS & WATER UTILITY  
INDUSTRIES

**Catch the  
criminal in  
action**

**Easy to install  
and maintain**

**Potential huge  
savings on your  
security bill**

**Protection 24/7**

**Unparalleled  
reliability and  
security for  
the price**

**webeye is the world's first fully cloud-based video alarm handling software, integrated with RSI Videofied. It allows users to receive and handle alarms via an internet connection. In addition to this, users can also receive and handle alarms while on the move, with the webeye smart phone app. webeye is set to revolutionise the alarm monitoring industry by offering an automated option, allowing clients to look after their own sites, while cutting the cost of protecting their site, valuables and assets.**

cms

With all utility companies, remote locations are vulnerable to theft or attack. **webeye** enables you to keep an eye on your sites from anywhere in the world using our smart phone app. And because of our fail safe PADARC\* response system you can be confident you'll get to know fast.

## **Unique.**

Most utilities have many hundreds of remote locations that need security monitoring. Arson, copper theft, vandalism and even coordinated system wide attacks have become priority concerns for security directors across the globe. **webeye** is the ideal security solution, all you need to receive the alarm is a browser or smart phone. Unique to **webeye** the complete alarm process is tracked and audited and we can deliver to an unlimited amount of devices, **so when we know, you know.**

## **Reliable.**

When tasked with remote site security, the cost of wiring the site for data consumes a great deal of the budget. Electric, gas and water utilities often have little choice in the matter. Either install a traditional alarm system that is prone to false alarms or bite the bullet and install CCTV video cameras with all the associated costs. The **webeye** video solution sends a 10 second video clip of the site to personnel via the web or directly to their smart device. Customers may also choose to have the sites monitored remotely via a monitoring service. As an entirely secure and wireless solution, the full system is installed in hours allowing customers to verify any remote site in an alarm status with the touch of a button. The solution also has benefits to customers and emergency services because call out's for false alarms cost the emergency services hundreds of millions of pounds a year. With this solution, alarms are verified via a short video clip within seconds virtually eliminating false alarms altogether.

## **Unbeatable price.**

**webeye** costs well below the price of traditional video solutions, there are additional benefits as well. Customers get much more for their money and can protect larger numbers of sites quickly and painlessly.

\* Progressive Alarm Delivery and Alarm Response Confirmation

## webeye for the utility industries

A quick response is key to catching the criminal in action - the webeye video alarm system offers complete peace of mind in 5 simple steps.

- 1** Upon intrusion a 10 second video clip is recorded
- 2** A SIM card in the control panel sends the video clip via GPRS to **webeye**
- 3** **webeye** delivers the video clip to you and your designated stakeholders and personnel's smart phones and devices
- 4** You receive the video clip within seconds to your devices with a loud siren ring tone
- 5** If there is no response we will keep trying every 10 minutes for 2 hours or until the alarm is viewed
