# Safety Of your Staff

GUARD AND LONE WORKER  
PROTECTION AND  
MONITORING SOLUTION

**webeyes**sos

including **track me**

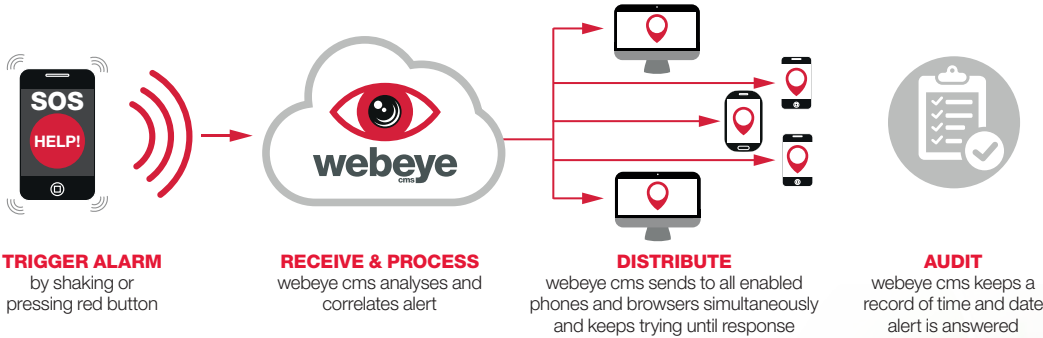

with **webeyes**sos you'll never be left  
guessing the whereabouts of your  
staff again

# STAFF & LONE WORKER SECURITY

Quick response, offers reassurance and is easy to use!

**webeyesos** is an app downloaded to a smart phone that tracks and monitors the users whereabouts. Once triggered it sends an alarm to any number of other smart phones enabled with the **webeyeCMS** alarm handling and management app\*\*

GET BACK-UP QUICK!  
PROCESS HANDLED IN SECONDS  
WITH UNBEATABLE RELIABILITY

• ACTS AS AN AUTOMATED MONITORING STATION BUT CAN BE SPECIFIED TO AN APPROVED MANNED STATION

SOS devices/apps are critical to anyone who may at times be in a vulnerable situation or position of risk and the integrity of the device is paramount to the safety of the user. **webeyesos** is the first product of its kind that, app side, exceeds the stringent British standards institute BS8484 producing the best solution possible both in the protection and risk limitation of a potential user.

The **webeyesos** app works on Android, Windows or Apple devices, through to the new webeye browser or to any number of enabled phones. This fast and reliable robust application will become an invaluable tool to greatly improve worker safety. We've now included enhanced safety features such as the 'man-down' and 'check-in' event which monitors for any periods of inactivity and can trigger an alert.

An addition to the webeyeSOS app and an ideal companion, is the **webeyesos track me** management function which allows you to monitor and track the movements of staff. Once they reach a site, or at any time you want, they press the track me button enabling you to follow their route in real time and can verify their actions.

## webeyesos

Staff and lone worker protection and monitoring app

**3** methods to trigger an alert

Trigger alarm by discreetly pressing the power button

OR

Shake the phone

OR

Trigger alarm by pressing large red SOS help button

- Send SOS alarm by discreetly pressing your phone's power button\* OR by shaking the phone OR pressing the large on-screen button
- Tells you the alert has been sent, but more importantly that the webeyeCMS platform has successfully received it
- Alerts you that someone is viewing your alarm
- Sends 10 seconds of recorded audio from point of alarm, to assist verification of a real problem\*
- Continuously transmits your location whilst in an alarm, not only stating where you were, but also where you are now

## webeyesos track me

Management tracking & monitoring function

- Enables managers to track and verify workers movements
- Registration with webeyeCMS platform
- Activate from on-screen button
- Monitor in real time on webeyeCMS browser

WEBEYESOS TRACK ME FUNCTION with large green tracking enabling button

\* Not available on windows mobile  
\*\* Also can be sent to the webeyeCMS alarm handling and management browser

# SOS

## How webeyesos works

1. Enable the user's smart phone with the webeyeSOS app.
2. If a user feels threatened or in danger they discreetly press the phone's power button OR shake the phone OR press the large on-screen button
3. Upon activation an alert is triggered and an alarm sent to the webeye browser and any number of webeyeCMS enabled smart phones.
4. Their location and movement is tracked every 10 seconds for 10 minutes or longer if required.
5. The sender's phone covertly vibrates every 30 seconds to inform the user the alert has been received and that back-up is on the way!

## How webeyesos man-down event works

1. Once enabled, any predetermined period of user in-activity will trigger a warning notification sent to the user.
2. The user has 2 minutes to acknowledge the warning otherwise a full alarm will be triggered.

## How webeyesos check-in event works

1. Once enabled, the user must check back into the app every 20 minutes (or whatever time period you set).
2. If the user fails to check-in at the scheduled time a full alarm will be triggered. Notification is displayed 2 minutes before check in is due as a prompt.

## How webeyesos track me works

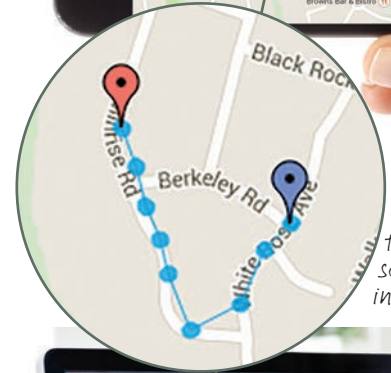

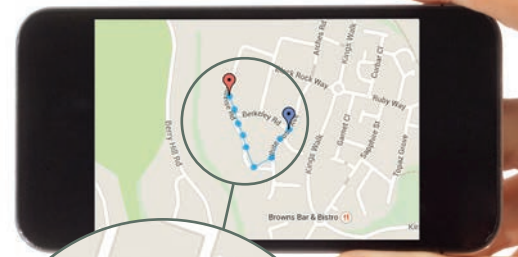

1. Enable your staff's smart phone with the webeyesos track me app.
2. When the worker wishes they press the track me button.
3. Upon activation their location and movement is tracked via the webeye browser or a webeyecms enabled smart phone for 30 minutes (which can be extended) or until the track me button is turned off.

## What makes webeyesos the best protection and monitoring app on the market!

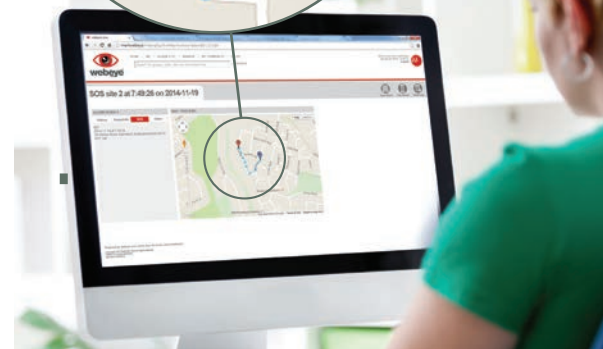

The secret to webeyeSOS's amazing reliability and security is because it works through the multi-award winning webeyecms alarm platform. Recognised as 'the world's best cloud security software' it is designed with the stability to provide a solution to reliability problems the competition fail to disclose. Most cloud-based systems make claims but we have unprecedented checks and balances to deliver on our promises. Part of the software is the PADARC (Progressive Alarm Delivery and Alarm Response Confirmation) which means when we know you know. Should any part of the delivery fail it's programmed to bypass the fault and move to an unprecedented number of back-up systems to guarantee you receive the alert. You may not be aware how unstable most of the competition can be but webeye is the only cloud based platform to boast a 99.9% reliability record. Webeye is fully audited so you'll know when and who answered the alert. Given the potential life-threatening importance of certain alarms it is dangerous to rely on old "Send and Forget" type technologies.

### ALARM RECIPIENT'S PHONE(S)

Once activated the user's movements are shown in real time on the map displayed in a browser or enabled smart phone

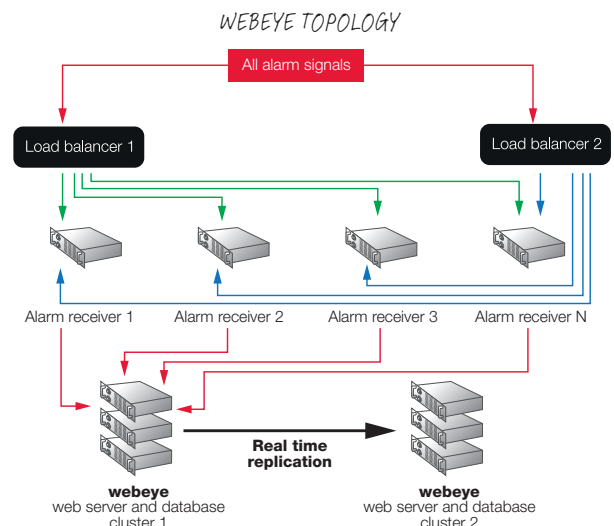

webeye tracks the senders movement in real time
