- ✓ Vehicle & fenced compounds
- ✓ Substations / utilities
- ✓ Cell towers
- ✓ Remote facilities, mines, gravel pits
- ✓ Agriculture
- ✓ Solar farms
- ✓ Copper theft
- ✓ Industrial
- ✓ Church roofs

COST EFFECTIVE AND HASSLE FREE PROTECTION

Since construction sites, compounds, substations and most outdoor sites are uncontrolled environments, video verification is especially important to eliminate costly false alarms. Videofied's portability means it can be moved around as the project evolves –before potentially being installed months later at a brand new site!

The indoor and outdoor PIRs have integrated cameras which generate 10 second video clips upon activation.

Videofied products can integrate with the award winning webeyeCMS cloud alarm platform allowing the alarms and video clips to be sent directly to stake holders on their smartphones and/or to a control room where an operator can view and manage alarms through a simple web browser (no expensive hardware or software required). The webeyeCMS platform also contains a full audit trail of who has opened the alarm and when (whether on a smartphone or web browser).

Webeye is alone in providing full training in the installation and operation of Videofied products and offers comprehensive customer support.

Once triggered Videofied with webeyeCMS delivers an alarm notification and a video clip to the right people within seconds

- The most advanced wireless security system with video verification
- Bi-directional radio range in 868 MHz European operating frequency
- GSM/GPRS alarm transmission
- 2 - 4 years battery life (no mains power requirement)
- Video verification allows security professionals to initiate a priority response.
- Videofied from Webeye is especially designed to secure outdoor and vulnerable environments
- Videofied with webeyeCMS is a complete security solution which integrates audio and video verification with a robust and secure method to deliver alarm notifications directly to the right people

XTO-IP ALARM PANEL

-30° / +60°C operating temperature

3 hardware inputs

2 hardware outputs

Booster antennas or GPRS and radio included
