GUARDING SOLUTIONS

A NEW APPROACH TO MONITORING

Webeye combines leading CCTV and alarm systems with unique cloud technology to deliver 24/7 monitoring solutions to aid staff safety, improve response times and increase profitability

Webeye Guarding Solutions

The common misconception of technology to enhance security is to install CCTV and to let guards just sit behind a screen or trawl through footage to gather evidence. The adoption of Webeye's responsive cloud technology gives you the power to take control of all your security monitoring which frees-up guards to become reactive to alarm events.

Features and options to take the hassle out of monitoring guards

LIVE STREAMING

The app allows you to see an incident as it happens on your own mobile

DASHBOARD

The browser function allows you to organise and monitor all your security

SOS

The optional SOS app turns the guard's smartphone into a fully functional personal safety device

FULL AUDIT

Never miss an alarm notification again with Webeye's comprehensive audit trail

Intelligent functionality designed so you can maximise your resources

- **No overheads and improved auditing**
 - **Takes charge of your alarm traffic so you can easily manage all your security**
 - **Reliable and secure cloud platform that is simple to operate**
 - **Patented escalation process to make sure you always receive alarms**
 - **Only use alarm products proven to work in demanding environments**
 - **No expensive outlay or additional infrastructure required to operate**
-

YOUR SUPPLIER WILL ADVISE ON THE MOST APPROPRIATE CCTV / ALARM PRODUCTS

See an immediate improvement in efficiency.

All you need is a Webeye approved alarm system/CCTV, and your own smart device or computer

1. Install a Webeye approved CCTV or Visual Verification Alarm system on site which acts as your remote eyes and ears. Webeye works with leading brands that are proven to work in harsh environments and deliver dependable alarm notifications and video clips via webeyeCMS if an alarm is triggered .

2. webeyeCMS is the unique feature in all Webeye Guarding Solutions. It is a pay-as-you-go cloud service that uses patented and fail-safe methods to make sure you receive alarm notifications and is robust enough to become your virtual monitoring station. The reason we can keep costs to a minimum is we've automated monitoring station processes such as handling, distributing and notifying all stakeholders of alarms. It is an intelligent system that has the power to handle all your alarm traffic whatever the size of your business.

3. Webeye sends all alarm notifications and video clips to stakeholders own computer or smart device meaning no additional outlay is required on bespoke infrastructure. Because you receive the information directly it empowers you to take control of your own security and efficiently manage and respond to events.

4. For a small additional charge, alarms can be escalated to a Webeye Approved Monitoring Station. For example, this is a particularly useful feature if you find all your guards are responding to other events and you need the reassurance someone is taking appropriate action such as calling the police. It is a more cost-effective service than employing a full time ARC / CMS because you decide at which point in the process you need to automatically escalate to a manned station.

Using technology to deliver simple solutions to complex challenges

Webeye is meeting the challenges faced by modern guarding and security companies for increased efficiency and accountability. Webeye's low-cost solutions for guarding increase operating capacity, improve safety and drive down costs.

Webeye have devised solutions that can interact at various points of your operating process to generate maximum efficiency.

1. Webeye automated monitoring 24/7 allowing police response

A cost-effective solution where you use a Webeye enabled CCTV or battery powered alarm system to act as a virtual guard to monitor a site. If it detects an intrusion the system will trigger an alert sent to webeyeCMS (Webeye's automated cloud alarm platform) which will process and deliver a fail-safe notification and video clip immediately to all stakeholders where they can take appropriate action such as calling the police.

2. Use your guards as a reactive force to respond to intrusions

Use Webeye as a force multiplier to turn your existing guards into a reactive team. If an intrusion is detected a notification is sent immediately to all available guards where the nearest team can respond quickly and take appropriate action which might mean calling for police back-up.

3. Webeye automated monitoring 24/7 with Monitoring Station back-up

If you or your guards are unable to respond for any reason the alarm notification can be escalated to a Webeye Approved Monitoring Station. This incurs a small additional charge but offers the reassurance someone is responding to intrusions and taking appropriate action. It is still more cost effective than using a full time Monitoring Station and arguably safer and more efficient.

webeyeTM
cms

Just a small monthly charge
can have a massive impact
on reducing your overheads

Case Study example

Abandoned 50 acre construction site with 5 buildings where a concern for safety and copper theft were identified as the main treat. Protected by a static guarding team spending **226 hours per week**.

Action taken

Unsustainable both operationally and financially so 40 cameras were installed around the site which trigger on intrusion allowing the guards to react to situations which reduced the guarding time to just **40 hours per week**.

Outcome

Time reduced by 186 hours per week!

82% Saving

webeyeCMS does all the hard work so you don't have too!

webeyeCMS works in much the same way as a monitoring station but uses industry leading automation to call and alert you directly, so it is you who can identify if it really is an intruder. The system records and notes all action and will keep trying until you acknowledge the call.

Alerts and video

webeyeCMS sends a notification / short video clip of any intrusion directly to your own smart phone or browser. You are not even limited to the number of colleagues you wish to receive alerts.

The world's fastest response

Speed is of the essence to catch the criminal. If an alarm is triggered, an alert takes just seconds to reach your device.

Powerful management tool

webeyeCMS is an hierarchy system that can perform a useful management function. For example, all information about your security 'estate' can be organized into an simple to view dashboard

Cloud storage

All events are stored and video events can be viewed for 2 years or up to 6 years if required.

Full monitoring 24/7, 365 days a year

We've fully automated the alarm receipt, alarm handling and alerting process - tasks traditionally done by a monitoring station. We're inherently more efficient and reliable because we're not limited by human alarm operator capabilities or errors.

Full audit trail

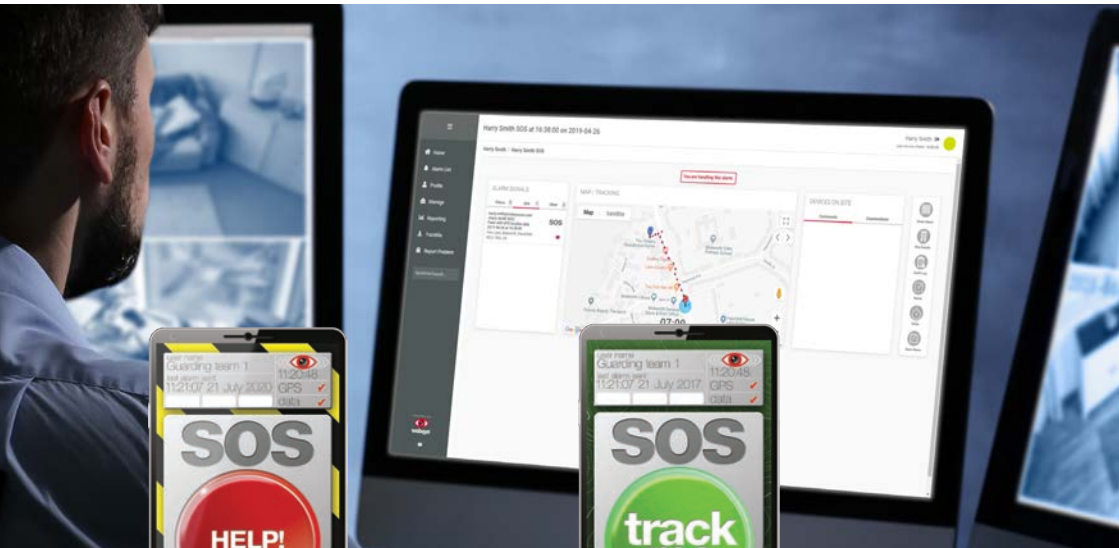

webeyeCMS keeps a record of any alarm activity and you can easily view your alarm history. The browser version not only tells you when an alarm was sent but also who viewed it.

100% reliability**

Large multi-national companies are now reaping the benefits and enjoying the efficiencies of using webeyeCMS. Testament to the durability of the system.

Add webeyeSOS and track me - Options for improved personal safety and reassurance for field staff

webeyesos

Just download the app to the users own smart phone. If the user feels threatened or unsure they simply press or shake for help - this triggers an alarm which is sent to any number of enabled smart devices which then tracks and monitors their whereabouts.

track me

With webeyeSOS track me you'll never be left guessing the whereabouts of staff. The track me app is downloaded to the worker's phone which is activated when they reach the site so their location and movement can be tracked via the Webeye browser.
