STUDENT, GUARDS AND LONE WORKER
PROTECTION & MONITORING SOLUTION

STUDENT & LONE WORKER SECURITY

Quick response, offers reassurance and is easy to use!

With **webeyesos**, if your students, guards or lone workers feel threatened or in danger, you'll never be left guessing their whereabouts again!

GET BACK-UP QUICK!
WITH UNBEATABLE
RELIABILITY

SOS devices/apps are critical to anyone who may at times be in a vulnerable situation or position of risk and the integrity of the device is paramount to the safety of the user. **webeyesos** is the first product of its kind that, app side, exceeds the stringent British standards institute BS8484. Although the standard is very comprehensive **webeyesos** goes well beyond the requirements and the results demonstrate webeye's resolve for producing the best solution possible both in the protection and risk limitation of a potential user.

The **webeyesos** app works on either an android or iphone device, through to the new webeye browser or to any number of enabled phones. Once triggered, it tracks the whereabouts of the user. Should they feel threatened or in danger he or she presses the phone's power button, or the SOS panic button or shakes the phone which immediately sends an alert to other enabled devices where their location is identified and tracked in real time. This fast and reliable robust application is an invaluable tool to improve campus safety. We've now included enhanced safety features such as the 'man-down' and 'check-in' event which monitors for any periods of inactivity and can trigger an alert.

An addition to the webeyesos app and an ideal companion, is the **webeyesos track me** management function which allows you to monitor and track the movements of staff. Once they reach the campus, or at any time you want, they press the track me button enabling you to follow their route in real time and can verify their actions.

webeyesos

Student, guard and lone worker protection and monitoring app

- Gives reassurance and improved safety to students, guards and lone workers
- Registration with webeye cms platform
- Send SOS alarm by either pressing the phone's power button, the on-screen help button or shaking the phone

- Automatically send GPS updates after SOS alarm
- Monitor in real time on webeye cms browser or smart phone

WEBEYESOS APP

with large red SOS help button

webeyesos track me

Management tracking and monitoring function

- Enables managers to track and verify workers movements
- Registration with webeye cms platform
- Activate from on-screen button
- Monitor in real time on webeye cms browser

WEBEYESOS TRACK ME FUNCTION

with large green tracking enabling button

How webeyesos works

1. Enable the user's smart phone with the webeyesos app.
2. If a user feels threatened or in danger they hit the large SOS help button or shake the phone.
3. Upon activation an alert is triggered and an alarm sent to the webeye browser and any number of webeyecms enabled smart phones.
4. Their location and movement is tracked every 10 seconds for 10 minutes or longer if required.
5. The sender's phone covertly vibrates every 30 seconds to inform the user the alert has been received and back-up is on the way!

How webeyesos man-down event works

1. Once enabled, any predetermined period of user in-activity will trigger a warning notification sent to the user.
2. The user has 2 minutes to acknowledge the warning otherwise a full alarm will be triggered.

How webeyesos check-in event works

1. Once enabled, the user must check back into the app every 20 minutes (or whatever time period you set).
2. If the user fails to check-in at the scheduled time a full alarm will be triggered. Notification is displayed 2 minutes before check in is due as a prompt.

How webeyesos track me works

1. Enable your staff's smart phone with the webeyesos track me app.
2. When the worker wishes they press the track me button.
3. Upon activation their location and movement is tracked via the webeye browser or a webeyecms enabled smart phone for 30 minutes (which can be extended) or until the track me button is turned off.

What makes webeyesos the best protection and monitoring app on the market!

The secret to webeyesos's amazing reliability and security is because it works through the multi-award winning webeyecms alarm platform. Recognized as 'the world's best cloud security software' it is designed with the stability to provide a solution to reliability problems the competition fail to disclose. Most cloud-based systems make claims but we have unprecedented checks and balances to deliver on our promises. Part of the software is the PADARC (Progressive Alarm Delivery and Alarm Response Confirmation) which means when we know you know. Should any part of the delivery fail it's programmed to bypass the fault and move to an unprecedented number of back-up systems to guarantee you receive the alert. You may not be aware how unstable most of the competition can be but webeye is the only cloud based platform to boast a 99.9% reliability record. Webeye is fully audited so you'll know when and who answered the alert. Given the potential importance of certain alarms, which may be life-threatening, it is dangerous to rely on old "Send and Forget" type technologies.

SOS

ALARM RECIPIENT'S PHONE(S)

Once activated the user's movements are shown in real time on the map displayed in a browser or enabled smartphone

webeye tracks the senders movement in real time
