What is webeyeCMS and
why do I need it?

webeyeCMS recognises the critical importance of alarm delivery

It is a unique cloud system designed to make sure you are informed if an alarm is triggered - invaluable if you are responsible for security or people's safety!

If you need to know, you need webeyeCMS.

Until now it has been expensive to buy reliable and trustworthy alarm delivery because you have had to pay for someone to sit behind a screen at a monitoring station to inform you of any alarm. Instead you now have the option to pay only a small monthly fee to receive an intelligent system that automatically handles and processes alarms via the cloud then delivers alerts and/or short videos directly to your own, or to any number of colleagues or friends mobile device or computer.

The system incorporates the patented PADARC (Progressive Alarm Delivery And Alarm Response Confirmation) with unprecedented checks and balances which sets the industry benchmark for fail-safe alarm delivery. Should any part of the delivery fail it is programmed to bypass the fault and move to an unprecedented number of back-up systems to ensure you receive the alert. webeyeCMS is fully audited so you know when and who has answered the alert. Given that many alarms could potentially be life-threatening it could also be foolish to just rely on "Send and Forget" type technologies such as email or SMS.

Monitored security that puts you in control.

webeyeCMS works in the same way as a monitoring station but uses industry leading automation to call and alert you directly, so it is you who can identify if it really is an intruder. The system records and notes all action and will keep trying until you acknowledge the call.

Key features

Alerts and video

Depending on which system you choose, webeyeCMS sends a notification and short video clip of any intrusion directly to your smart phone or browser. You can also choose as many colleagues, family or friends as you like to receive your alerts.

The world's fastest response

Speed is of the essence to catch the criminal. For example, with our residential system, an alert only takes 3 seconds to reach your smart phone if an alarm is triggered.

Cloud storage

All events are stored and video events can be viewed for up to 6 years if required.

Full monitoring 24/7, 365 days a year

We've fully automated the alarm receipt, alarm handling and alerting process arguably making the role of some traditional monitoring stations redundant. We're not limited by human alarm operator capability or errors thus making us more efficient and reliable.

Full audit trail

webeyeCMS keeps a record of any alarm alert. Your alarm history can be accessed though either the browser or from your handset. The browser version has a full audit trail because it not only tells you when an alarm was sent but also who viewed it.

100% reliability*

Large multi-national companies now benefit from webeyeCMS. Testament to the reliability and efficiency of the system. In the years we've been developing and operating webeyeCMS we've never had a total system failure.

Unique

webeyeCMS is the world's first fully automated and managed professional monitoring solution - it takes over the role of people in a monitoring station by automating the alarm receipt, handling and alerting process.

Reliable

webeyeCMS is a reliable and efficient method to deliver alarms directly to the stakeholder meaning the process avoids any costly false alarms. It can bypass the expense of a traditional monitoring station but it also avoids the unreliability and weak security of a self-monitored app.

Efficient

webeyeCMS is the key to a more robust and efficient security program whether for business or the home. Integrate it with any of our sensor activated security systems and webeyeCMS is the ideal security solution and all you need to receive the alarm is a browser or mobile device. Unique to webeye, the complete alarm process is tracked and audited and because the solution is infinitely scalable we can deliver to an unlimited amount of devices, so when we know, you know.

For total security and reassurance in the commercial or residential sector webeye is the complete package.

No expensive infrastructure

Just integrate into a webeyeCMS enabled sensor activated security system.

No software required

All the amazing stuff sits on the cloud.

No dedicated receiving equipment

Notifications are received on your own computer or mobile device.
