What is webeyeCMS?  
And why you need it!

---

“Receiving dependable and reliable information is vital to maintain credible security”

Clive Mason, Founder of Webeye Limited

webeyeCMS is an intelligent platform that uses fail-safe methods via the cloud to send, receive and monitor alarms. We recognise the critical importance of alarm delivery.

Until now it has been expensive to buy trustworthy alarm delivery because you have had to pay for someone to sit behind a screen at a monitoring station to inform you of any alarm. You now have the option to pay only a small monthly fee to receive an intelligent system that automatically handles and processes alarms then delivers alerts and/or short videos directly to your own, or to any number of colleagues mobile device or computer.

The system incorporates the patented PADARC\* with unprecedented checks and balances which sets the industry benchmark for fail-safe alarm delivery. Should any part of the delivery fail it is programmed to bypass the fault and move to an unprecedented number of back-up systems to ensure you receive the alert. webeyeCMS is a fully audited system so you know when and who has answered the alert. Given that many alarms could potentially be life-threatening it could also be foolish to just rely on 'Send and Forget' type technologies used by our competitors such as email or SMS.

If you need to know, you need webeyeCMS.

## Monitored security that puts you in control.

webeyeCMS works in much the same way as a monitoring station but uses industry leading automation to call and alert you directly, so it is you who can identify if it really is an intruder. The system records and notes all action and will keep trying until you acknowledge the call.

### Alerts and video

webeyeCMS sends a notification / short video clip of any intrusion directly to your own smart phone or browser. You are not even limited to the number of colleagues you wish to receive alerts.

### The world's fastest response

Speed is of the essence to catch the criminal. If an alarm is triggered, an alert only takes 3 seconds to reach your device.\*\*

### Powerful management tool

webeyeCMS is an hierarchy system that can perform a useful management function. For example, all information about your security 'estate' can be organized into an simple to view dashboard

### Cloud storage

All events are stored and video events can be viewed for 2 years or up to 6 years if required.

### Full monitoring 24/7, 365 days a year

We've fully automated the alarm receipt, alarm handling and alerting process - tasks traditionally done by a monitoring station. We're inherently more efficient and reliable because we're not limited by human alarm operator capabilities or errors.

### Full audit trail

webeyeCMS keeps a record of any alarm activity and you can easily view your alarm history. The browser version not only tells you when an alarm was sent but also who viewed it.

### 100% reliability\*\*\*

Large multi-national companies are now reaping the benefits and enjoying the efficiencies of using webeyeCMS. Testament to the durability of the system.

## Why you need it

- As the security industry is increasingly relying on technology to deliver security and improve efficiency the need for credible information from your alarm system is vital to maintain a successful business
- webeyeCMS is an easy to use system that puts the power into your hands because we believe as professionals, you are the best qualified to control your security 'estate'

## How it works

- webeyeCMS sits on the cloud to deliver and monitor alarms
- PADARC is Webeye's unique methodology for fail-safe alarm delivery
- Webeye works with leading integration partners to offer total security solutions

## What are the benefits

- Existing or limited resources are not an inhibitor to your growth potential
- An effective management tool to improve your competitiveness
- A low cost alternative / enhancement to a traditional monitoring station

### No expensive infrastructure or training

If you have a Webeye approved system on site we'll integrate it with your own smart devices to become a fully professional alarm and monitoring solution.

### No complicated software required

All the amazing stuff sits on the cloud. No contract, just a pay as you go, service that you only pay for when a system is commissioned.

### No dedicated receiving equipment

Monitor your security from wherever you are. All the user needs is a computer or smart device connected to the Internet.

### No costly administration fees

You can structure the system so can view how your security 'estate' is performing and it keeps an audit trail of who and when a notification was answered.
